English (Both)
Marathi (Both)

PROJECTS

MindRush - react based Quiz app | October 2025 - November 2025

- Developed a dynamic and responsive Quiz Application using React.js, integrated with a Free Quiz API to fetch real-time questions. The application allows users to attempt quizzes with multiple-choice questions, track their progress, and view scores instantly.

Implemented core React concepts such as functional components, useState, useEffect, and conditional rendering to manage application state and API data efficiently. Designed a user-friendly interface with smooth navigation between questions and real-time answer validation.

Handled API integration, asynchronous data fetching, and error handling to ensure a seamless user experience. The app is fully responsive and works across different screen sizes.

This project strengthened my understanding of React fundamentals, REST APIs, state management, and frontend application flow, while focusing on clean code and scalable component structure.

Tech Stack: React.js, JavaScript (ES6), HTML, CSS, REST API
